

## Scenario #1 - Plan and Prepare

1. Aaron grew up in the Pacific Northwest which means he's no stranger to earthquake preparedness. His wife is from Boston and has no experience with earthquake training. Now that their kid is old enough to follow basic instructions, Aaron decides it's time to teach his family about earthquake preparedness. While doing a Google search about earthquake safety he finds and downloads the BeReady app.
2. Aaron starts by using the app's tutorial information to teach his wife and child about what to do during an earthquake.
3. After earthquake proofing their home, Aaron and his wife make Go-kits for the kid and themselves and also make 72-hour emergency kits for their home and offices according to the specifications outlined in the app.
4. With their kits packed and stowed, they follow the guidelines and checklists included in the app to:
  - a. Choose an out-of-state contact - they choose Aaron's uncle Dave, who lives in WA.
  - b. Create escape routes - routes that show the fastest way out of their home and offices.
  - c. Pick a reunification location - they choose Dolores park, put in the address and mark the GPS location.
5. They preview the maps with evacuation routes and the ones leading to the reunification spot and save those maps on Aaron's phone as images outside the app.
6. They look for a way to export the entire family plan to a pdf. Once they find it, they create the PDF, email it to themselves and print a copy for each family member.
7. Aaron and his wife completed all of the important checklists, verified they have everything in order, and even told a few friends about the app.
8. Aaron installs the app on his iPad and his wife's phone and uses the family network option to link all of the device up and share the plan information between them.
